BUSINESS REQUIREMENTS DOCUMENT · BRD

NUVI Social Media Advertisement Distribution Manager

A Google Chrome extension that keeps all of NUVI's Facebook groups in one place and guides the team, group by group, through sharing each advertisement. The final posting action always stays with the user.

BUSINESS OWNER

NUVI Engineering (Pvt) Ltd

Internal business application

PREPARED BY

Amritha Hitige

NUVI Engineering (Pvt) Ltd

APPLICATION TYPE

Google Chrome Extension

Manifest V3 · no backend in Version 1

DATE / VERSION

Document control

Item	Detail
Document	Business Requirements Document (BRD)
Application	NUVI Social Media Advertisement Distribution Manager
Project type	Internal business application (Google Chrome extension)
Business owner	NUVI Engineering (Pvt) Ltd
Supported businesses	NUVI Engineering (Pvt) Ltd · NUVI IT (Pvt) Ltd
Prepared by	Amritha Hitige
Version / Date	1.0 · 13 November 2026
Status	Draft. To be finalized before the Technical Document and System Architecture Document are prepared

How to read the requirement tables

Label	Meaning
PHASE 1	Minimum Viable Product. Needed for the first working release
PHASE 2	Campaign management features, added after Phase 1 is in use
PHASE 3	Advanced features, developed once the application is established
ADDED	Not in the original requirement note. Added during BRD preparation to close a gap (see Section 14)

01 · PROJECT OVERVIEW

Background and the problem we are solving

NUVI runs two businesses, **NUVI Engineering (Pvt) Ltd** and **NUVI IT (Pvt) Ltd**, and each has its own Facebook Business Page. The social media team creates advertisements, publishes them on the right Page, and boosts some of them through Facebook Ads.

To reach more buyers, NUVI also shares these advertisements in relevant **Facebook groups**. NUVI Engineering has already identified about **39 groups** (house and land selling, property trading, local community and location-based groups). NUVI IT keeps its own set of industry groups.

> **The problem today:** for every advertisement, the team must search for each group, open it, find the advertisement again and share it. This is slow and repetitive, it's easy to miss a group or share in the same group twice, and nobody has a record of where each advertisement was shared.

Proposed solution

A lightweight **Google Chrome extension** that:

- keeps a separate **Facebook group directory** for each business;
- stores each **master advertisement** (the original Facebook post URL);
- lets the user pick target groups and press **Start Distribution**;
- opens the selected groups **one after another in the same browser tab**;
- leaves the final share or post action to the **user**, who then marks the result and moves to the next group;
- records progress and keeps a **history** of every distribution campaign.

> **Main objective:** remove the repetitive searching, navigation and post-finding, while keeping every publishing decision in human hands.

02 · OBJECTIVES & BENEFITS

#	Objective
1	Keep all Facebook group URLs in one central place
2	Separate groups by business
3	Manage NUVI Engineering and NUVI IT independently
4	Store and reuse master advertisement URLs
5	Select multiple groups for one advertisement
6	Open selected groups automatically, one by one
7	Let users share the original advertisement manually
8	Track distribution progress
9	Prevent accidental duplicate sharing
10	Keep a history of previous campaigns

Benefit	Description
Time saving	No manual searching for groups
Central management	All group URLs in one application
Business separation	Engineering and IT activities kept apart
Productivity	Many groups handled in one guided workflow
Accuracy	Fewer missed groups
Tracking	Shows which groups received each advertisement
Reusability	Groups and advertisements reused for future campaigns

03 · SCOPE & PHASES

What is in scope, and what is not

In scope (Version 1)
Two businesses with fully separate data
Facebook group directory: add, edit, delete, search, filter, CSV import
Master advertisement register (existing Facebook posts)
Guided distribution, one group at a time in the same tab
Manual publishing confirmation and status tracking
Resume after interruption; duplicate warnings
Campaign history and completion summary
Local storage on the user's computer, with backup and restore

Out of scope
Creating or boosting Facebook advertisements
Managing Facebook Ads Manager
Automatically creating or publishing posts in groups
Reading or changing the content of Facebook pages
Facebook comments and Messenger
Instagram, TikTok, YouTube
Backend server, cloud database, user logins (Version 1)
Browsers other than Google Chrome desktop

Development phases

Phase	Goal	Main features
PHASE 1 · MVP	Get the application working for NUVI Engineering's current 39 groups	Business selection, group management, CSV import, advertisement management, group selection, sequential navigation in one tab, side panel controls, manual confirmation, basic progress, backup/restore
PHASE 2	Campaign management	Campaign history, resume, duplicate warnings, filters, full status management, campaign summary reports, posting-gap reminders, settings
PHASE 3	Advanced features	Distribution analytics, group performance, enquiry tracking, campaign comparison, report export, more businesses

04 · USERS & STAKEHOLDERS

Who	Role / interest
Social media team member (main user)	Registers advertisements, maintains groups, runs distribution campaigns and confirms each share
NUVI management	Wants wide reach for property and IT advertisements, and visibility of where each advertisement was shared
NUVI IT (development team)	Builds and maintains the extension
Facebook group administrators (external)	Set each group's posting rules and approvals; the application must respect them

Version 1 has no user logins. Anyone using the Chrome profile where the extension is installed can use it (see Section 14, decision 1).

05 · BUSINESS PROCESS

End-to-end process: selling a house in Kiriwaththuduwa

A real example of the full process. Steps marked FACEBOOK stay outside the application; SYSTEM steps are done by the extension; USER steps are always manual.

1 Create the advertisement FACEBOOK

The social media team creates the house advertisement and publishes it on the NUVI Engineering Facebook Page.

2 Boost (optional) FACEBOOK

The team boosts the post through Facebook Ads Manager.

3 Register the advertisement USER

Open the extension → select **NUVI Engineering** → add "Kiriwaththuduwa House for Sale" with the original post URL.

4 Select groups USER

The extension lists all 39 Engineering groups (active ones ticked). The user keeps the relevant ones, e.g. Kiriwaththuduwa Api, Homagama Api, Kottawa Api.

5 Start distribution SYSTEM

The user clicks **START DISTRIBUTION**. A new campaign is created, and the first group opens in the distribution tab.

6 Share the advertisement USER

Using Facebook's own options (e.g. pasting the copied ad link into a group post, or Facebook's Share), the user shares the master post. The user picks the posting identity and handles any group rules.

7 Confirm the result USER

In the side panel, the user clicks **PUBLISHED – NEXT GROUP**, or marks **Skip**, **Approval Required** or **Failed**.

8 Open the next group SYSTEM

The status is saved, and the same tab moves to the next selected group. Steps 6–8 repeat.

9 Save progress continuously SYSTEM

After every action, progress is saved. If Chrome closes, the user resumes from the next unprocessed group.

10 Campaign summary SYSTEM

When all groups are done, a summary shows: e.g. 30 selected · 24 Published · 3 Skipped · 2 Approval Required · 1 Failed.

In one line: Select business → choose advertisement → choose groups → Start → [group opens → user shares → user confirms → next group] → summary → history.

Key principle: opening a group page does **not** mean the advertisement was published. A group is marked Published **only** when the user confirms it.

06 · FUNCTIONAL REQUIREMENTS

What the application must do

Requirements are grouped into seven modules. IDs FR-001 to FR-029 come from the original requirement note; FR-030 onwards were added during BRD preparation.

M01 Business Management

Manage groups and advertisements separately for each business.

FR-001 **Business listing:** two predefined businesses: B001 · NUVI Engineering (Pvt) Ltd B002 · NUVI IT (Pvt) Ltd — P1

FR-002 **Business selection:** the dashboard has a clear business switch. When one business is selected, only its groups, advertisements and campaigns are shown. The selected business is remembered and clearly shown (with its colour) on every screen. — P1

FR-003 **Data separation:** groups, advertisements, distribution progress and campaign history are kept separately for each business. One business can never use the other's group directory. — P1

M02 Facebook Group Management

Keep all group information in one place (about 39 groups for NUVI Engineering today).

FR-004 **Add group** with these fields: — P1

Field	Rule	Example
Group Name *	Text (Sinhala or English)	Kiriwaththuduwa Api
Group URL *	Must be a valid facebook.com/groups/... link	facebook.com/groups/233212924715137/
Business *	Taken from the selected business	NUVI Engineering
Category	From a list (Property, Location-Based, Business...)	Location-Based
Location	Geographic area	Kiriwaththuduwa
Status *	Active / Inactive (default Active)	Active
Notes	Free text, e.g. posting rules of the group	"No shares, post the link only"

FR-005 **Edit group:** change name, URL, category, location, status or notes. — P1

FR-006 **Delete group** after a confirmation message. Past campaign history keeps the group's name (see BR-017). — P1

M02 Facebook Group Management (continued)

FR-007	**View all groups** of the selected business, with the total count, name, category, location, status and an Edit action.	P1
FR-008	**Search groups** by name as the user types (e.g. "Homagama" shows all matching groups).	P1
FR-009	**Filter groups** by category, location and Active/Inactive status (business is already set by the business switch).	P2
FR-010	**Bulk import from CSV** (UTF-8, Sinhala names supported): `group_name,group_url,category,location,status` A preview lists valid rows, **invalid URLs** and **duplicates**; only valid, new rows are imported, followed by a result summary.	P1
FR-030	**Duplicate group check on add and edit:** URLs are compared in a standard form (ignoring http/https, "www."/"m.", query text and a trailing "/"), so a group can't be saved twice in one business.	ADDED P1
FR-031	**Export groups to CSV** in the same format as the import (for editing in Excel or sharing).	ADDED P2

M03 Advertisement Management

Register master advertisements that are already published on NUVI's Facebook Pages. The application does not create, publish or boost advertisements.

FR-011 **Add master advertisement:** P1

Field	Rule / example
Advertisement Name *	Internal name: "Kiriwaththuduwa House for Sale"
Business *	Taken from the selected business
Facebook Post URL *	Original post URL on the NUVI Page
Advertisement Type	From a list per business: House, Land, Construction, Property Project / Software, Website, Inventory System...
Description	Optional, e.g. "Two-bedroom house for sale"
Created Date	Set automatically (can be edited)
Status	Active / Completed / Archived

FR-012	**Edit advertisement** details.	P1
FR-013	**Delete advertisement** after confirmation. If it has campaign history, the system suggests **Archive** instead, and history is never lost.	P1
FR-014	**View advertisements** of the selected business: name, type, date, status and the number of groups already published to.	P1
FR-015	**URL validation:** the URL cannot be empty and must be a Facebook link (facebook.com or fb.com). The extension does **not** read the post's content.	P1

M04 Advertisement Distribution (core module)

Distribute one master advertisement across many groups, one group at a time.

FR-016 — **Select advertisement:** choose an Active advertisement of the selected business; its Facebook post URL loads automatically (read-only here). — P1

FR-017 — **Select target groups:** list all groups of the business with checkboxes; **Select All** (active groups), **Deselect All**, search inside the list, and a live "Selected Groups: n" count. Groups already published with this advertisement are marked. — P1

FR-018 — **Start distribution:** START DISTRIBUTION creates a new campaign (e.g. CAM-004) and begins the sequence. It is disabled until an advertisement and at least one group are selected. — P1

FR-019 — **Open groups one by one in the same tab:** the first group opens in the **distribution tab**. After the user confirms a result, the **same tab** moves to the next group. A new tab is never created for each group. — P1

FR-020 — **Navigation controls:** — P1

Button	Function
Start	Start distribution
Published – Next Group	Mark the current group Published and open the next group
Skip	Mark the current group Skipped and open the next group
Previous	Go back to the previous group (its status can be corrected)
Pause / Resume	Stop temporarily / continue from the saved position
Stop	End the session; unprocessed groups stay Pending and the campaign can be resumed later

A group is **never** marked Published just because its page opened.

FR-021 — **Open original advertisement** in a **separate tab**, so the group page in the distribution tab is not lost. — P1

FR-022 — **Manual publishing:** the extension never clicks Facebook's Share or Post buttons. The user handles admin approval, advertising restrictions, profile-only groups, extra questions or a missing Share option. — P1

FR-032 — **Control panel stays visible:** the distribution controls open in Chrome's **side panel**, next to the Facebook page, and stay open while the user works on Facebook. A normal extension popup closes as soon as the user clicks the page. — ADDED P1

FR-033 — **Distribution tab handling:** the tab used at Start becomes the distribution tab. If the user closes it, the next action opens one new tab and continues there. — ADDED P1

FR-034 — **Copy advertisement link:** a one-click button copies the master post URL, so the user can paste it into the group's post box. — ADDED P1

FR-035 — **Show group details while processing:** current group name, position (e.g. 3 / 30), location and the group's **Notes** (posting rules). — ADDED P1

M05 Distribution Progress Tracking

Track the result of every group in every campaign.

FR-023 **Group distribution status** (per group, per campaign): P1

Status	Meaning
Pending	Not yet processed
In Progress	Currently open in the distribution tab
Published	The user confirmed a successful share
Skipped	The user chose to skip
Approval Required	Shared, but waiting for the group admin's approval
Failed	The user could not complete the share

FR-036 **Approval Required and Failed buttons** in the side panel, each with an optional short reason (e.g. "Group allows only personal profiles"). Both move to the next group. ADDED P1

FR-024 **Progress dashboard:** business, advertisement, total groups, counts per status, a progress bar and the % completed. Example: 39 total · 12 Published · 20 Pending · 4 Skipped · 2 Approval Required · 1 Failed → 30.77% published. P1

FR-037 **Campaign completion summary:** when all groups are processed, a summary screen shows the counts and lists of each status, and the campaign is marked Completed. ADDED P1

FR-025 **Resume distribution:** progress is saved after every action. After Chrome is closed or Stop is pressed, the user can resume from the **next unprocessed group**. P2

FR-026 **Duplicate distribution warning:** if this advertisement was already marked Published (or Approval Required) in a group, show a warning before the group opens: *"This advertisement was already marked as published in Kiriwaththuduwa Api on 13/11/2026. Do you want to continue?"* The user chooses Continue or Skip. P2

FR-038 **Update status later:** change a group's status after the campaign, e.g. Approval Required → Published once the admin approves, or Failed → Published after a retry. Every change is dated. ADDED P2

FR-039 **Posting-gap reminder (optional setting):** ADDED P2

- an optional minimum wait between groups (e.g. 60 seconds), shown as a countdown;
- a warning if a group already received *any* NUVI advertisement within the last N days.

This helps avoid Facebook's spam limits and groups' own posting rules.

M06 Distribution History

Keep records of all previous campaigns.

FR-027	**Campaign history:** every distribution session is saved with: Campaign ID, business, advertisement, start date and time, completion date and time, selected groups, and the Published, Skipped, Failed and Approval-Required groups (with reasons).	P2
FR-028	**View previous campaigns** for the selected business: Campaign, Advertisement, Date, Groups Published / Selected, Status. Open any campaign to see its group-by-group results.	P2
FR-029	**Reuse a previous campaign:** start a new distribution from an older advertisement, optionally reusing the same group selection. A **new** campaign is always created, and old history is never overwritten.	P2
FR-040	**Advertisement distribution view:** for any advertisement, see every group it has been published to, across all its campaigns.	ADDED P2

M07 Settings & Data Safety

Data is kept only inside the user's Chrome browser, so it must be easy to back up, move and restore.

FR-041	**Backup (export):** download all data (both businesses: groups, advertisements, campaigns and settings) as one dated backup file. A reminder appears if no backup was made in the last 7 days.	ADDED P1
FR-042	**Restore (import backup):** load a backup file, for example on a new computer or after reinstalling Chrome. A clear warning is shown before existing data is replaced.	ADDED P1
FR-043	**Settings:** manage the drop-down lists (group categories, locations, advertisement types per business), the posting-gap values (FR-039) and the backup reminder. Reset all data only after a double confirmation.	ADDED P2

Phase 3 – future features (not detailed in this version)

Feature	Idea
Distribution analytics	Trends of published / failed / approval rates over time
Group performance tracking	Which groups accept posts and bring results
Enquiry tracking	Record enquiries received from each group or advertisement
Campaign comparison	Compare results between campaigns
Export campaign reports	Download campaign results (CSV / PDF)
Additional businesses	Add more businesses beyond the two predefined ones

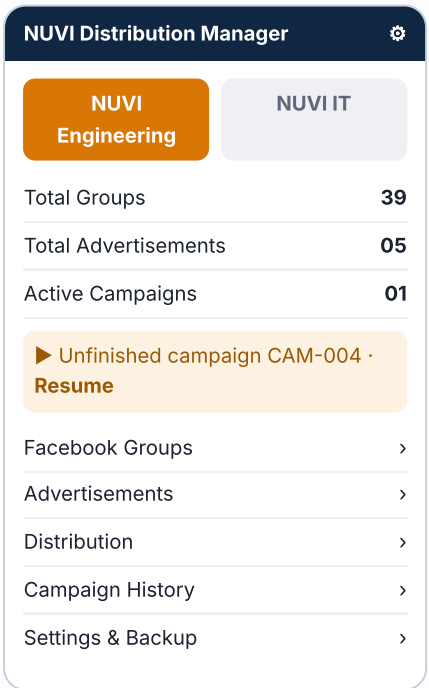

07 · USER INTERFACE REQUIREMENTS

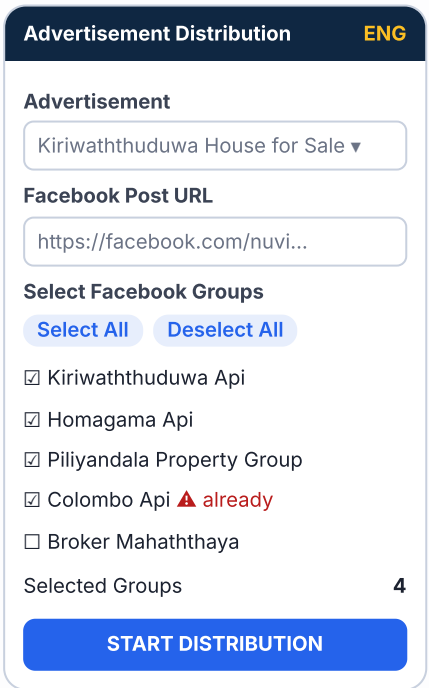

Simple, clean screens

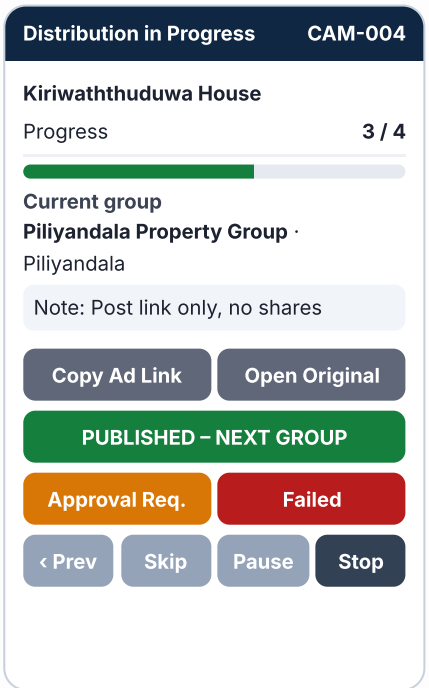

The interface opens in Chrome's **side panel**, so it sits next to the Facebook page throughout a campaign. The selected business's colour (Engineering = amber, IT = purple) is shown on every screen.

Screen	Contents	Requirements
1. Dashboard	Business switch; totals (groups, advertisements, active campaigns); menu; resume banner if a campaign is unfinished	FR-001–003, 025
2. Facebook Groups	List, search, filters, add/edit form, delete, CSV import preview, export	FR-004–010, 030–031
3. Advertisements	List, add/edit form, archive/delete, per-ad distribution view	FR-011–015, 040
4. Distribution Setup	Choose advertisement, choose groups, START	FR-016–018
5. Distribution in Progress	Current group, progress, action buttons, copy link, open original	FR-019–024, 032–036, 039
6. Campaign Summary	Final counts and lists per status	FR-037
7. Campaign History	Campaign list, campaign detail, reuse, status updates	FR-027–029, 038
8. Settings	Lists, posting gap, backup / restore, reset	FR-041–043

Wireframes (layout guidance only)

08 · BUSINESS RULES

Rules the application must follow

Rule ID	Business rule
BR-001	The application supports two businesses: NUVI Engineering and NUVI IT.
BR-002	Each business keeps a separate Facebook group directory.
BR-003	Each advertisement belongs to exactly one business.
BR-004	An advertisement can be distributed to many groups, and in many campaigns.
BR-005	Only **Active** groups are selected by default (Select All). Inactive groups are shown greyed out and are not selectable until set to Active.
BR-006	Users can manually select or deselect groups.
BR-007	Groups are processed one at a time, in order, in a single distribution tab.
BR-008	The application never publishes advertisements automatically.
BR-009	A status of Published must be confirmed by the user. Opening a group page is not confirmation.
BR-010	Distribution progress is saved locally after every action.
BR-011	Previous campaign records are kept and never overwritten.
BR-012	Re-distributing an advertisement to a group where it was already published shows a warning first.
BR-013	Engineering advertisements cannot use the IT group directory, and IT advertisements cannot use the Engineering directory.
BR-014	Group membership and posting permissions are governed by Facebook's rules and each group's rules; the application does not try to bypass them.
BR-015 ADDED	The extension only **navigates** the browser tab. It does not read, change or click anything on Facebook pages.
BR-016 ADDED	A group can appear only once in a campaign, and a group URL only once within a business directory.
BR-017 ADDED	Deleting a group or an advertisement never deletes campaign history; history keeps the names as they were.
BR-018 ADDED	Only one campaign can be in progress at a time (per Chrome profile). Starting another asks the user to pause or stop the current one.
BR-019 ADDED	Facebook passwords, login cookies or account data are never stored or sent anywhere.

09 · INFORMATION TO BE STORED

Business information (high level)

Information	Main details kept
Business	ID (B001 / B002), name, colour
Facebook Group	ID, business, name, URL (and its standard form), category, location, status, notes, created / updated dates
Advertisement	ID, business, name, Facebook post URL, type, description, created date, status
Campaign	ID (CAM-001…), business, advertisement, start / completion date and time, status (In Progress / Paused / Stopped / Completed), current position, distribution tab
Campaign Group Result	Campaign, group (with its name at that time), order, status, reason, date and time of each status change
Settings	Drop-down lists, posting-gap values, last backup date, last selected business

The detailed data design will be in the Technical Document.

10 · NON-FUNCTIONAL REQUIREMENTS

How the application should behave

ID	Area	Requirement
NFR-01	**Performance**	Opens in under 1 second; handles at least **500 groups** per business with instant search and filtering
NFR-02	**Navigation**	Never creates unnecessary tabs: one distribution tab, plus at most one tab for the original advertisement
NFR-03	**Storage**	Chrome local storage for Version 1, with no external database. Use IndexedDB if campaign history grows large
NFR-04	**Security**	No Facebook passwords, credentials or cookies stored; uses the existing Facebook login in the browser; no data sent to external servers
NFR-05	**Permissions**	Requests only the Chrome permissions it needs (e.g. tabs, storage, side panel, clipboard write); no access to page content
NFR-06	**Reliability**	Progress survives browser restarts and extension restarts; interrupted sessions recover; invalid URLs and duplicate groups are caught; error messages are clear
NFR-07	**Compatibility**	Google Chrome desktop (version with side panel support, 114 or later). Other Chromium browsers later
NFR-08	**Usability**	English interface; Sinhala group names display correctly; a new user can run a campaign without training
NFR-09	**Maintainability**	Simple, well-structured code; businesses and drop-down lists stored as data, ready for Phase 3 (more businesses)
NFR-10	**Data safety**	Backup and restore available from Phase 1; backup reminder; uninstalling the extension clears its data, so users are warned to back up first

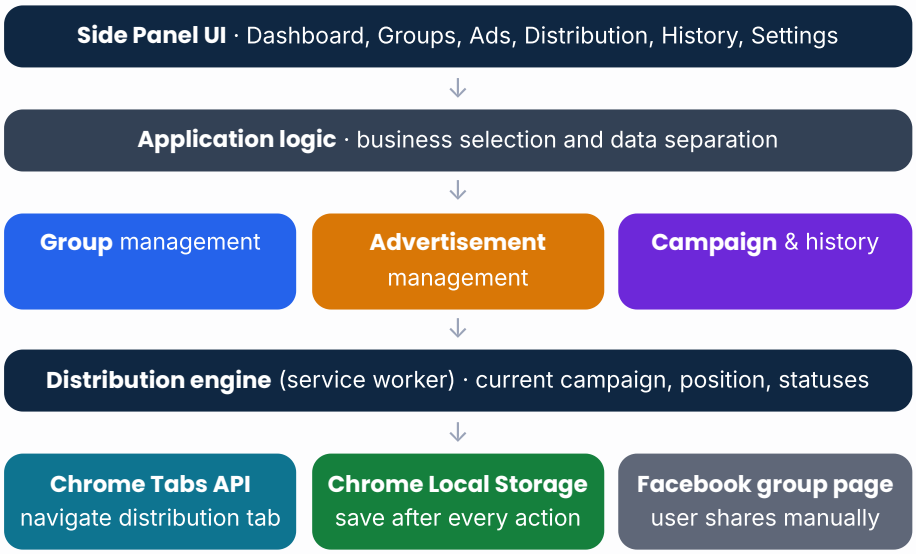

11 · TECHNICAL DIRECTION (HIGH LEVEL)

Recommended approach

This section gives direction only. Full details will be in the **Technical Document** and the **System Architecture Document**, prepared after this BRD is finalized.

Component	Recommendation
Application	Google Chrome Extension, **Manifest V3**
User interface	Chrome **Side Panel** (main UI); HTML, CSS and JavaScript, or React
Background processing	Service worker (MV3)
Browser navigation	Chrome Tabs API: update the URL of the distribution tab
Storage	Chrome Local Storage (IndexedDB if needed later)
UI ↔ background	Chrome Runtime Messaging
Backend / database / login	Not required for Version 1
Content scripts on Facebook	**Not used** (BR-015). The extension never touches Facebook page content

Application structure

Important (Manifest V3): Chrome can suspend the background service worker when it is idle. The distribution state must **always be saved to storage**, not kept only in memory. This includes the current campaign ID, current group position, selected group IDs, completed group IDs, each status and the last processed group. The state must be reloaded whenever the side panel opens or the service worker restarts.

12 · LIMITATIONS & ASSUMPTIONS

Important points before development

Topic	Limitation / assumption
Facebook API	The Facebook Graph API is **not** used to post to groups. Meta removed the Groups API in April 2024, so the application works by navigating the browser to group URLs.
Share option	Not every group allows the original post to be shared. Some allow only new posts (the user can paste the copied link, FR-034). The application cannot guarantee a share option exists.
Posting identity	The user selects the correct identity on Facebook (NUVI Engineering Page for property ads, NUVI IT Page for software ads). Some groups allow only personal profiles; the application does not bypass this.
Administrator approval	Some groups hold posts for admin approval. The user marks these as **Approval Required** and can update them later (FR-038).
No automatic bulk publishing	The extension never submits posts to the groups by itself. This avoids unsupported Facebook interfaces and lowers the risk of account restrictions.
Facebook spam limits	Sharing the same link to many groups quickly can trigger Facebook's limits even when done manually. Use the optional posting gap (FR-039) and spread large campaigns over time.
Group membership	The user's Facebook account (or Page) must already be a member of each group. Joining groups is outside the application.
Data stays on one browser	Data lives in one Chrome profile on one computer and is **not shared** between team members or computers. Data moves only by backup and restore (FR-041, FR-042).
Uninstall	Removing the extension deletes its stored data. Users must take a backup first.
Facebook changes	Facebook may change its pages or group URL formats. Because the extension only opens URLs, the impact is low, but URL validation rules may need updates.
Distribution	The extension is installed for internal use (unpacked or privately published). Publishing on the public Chrome Web Store is not assumed.

Responsibility: each person sharing advertisements remains responsible for following Facebook's Community Standards and each group's rules. The application only reduces navigation effort.

13 · ACCEPTANCE CRITERIA

When is the first release ready?

ID	Test	Expected result	Phase
AC-001	Select NUVI Engineering	Only Engineering groups and advertisements are shown	P1
AC-002	Select NUVI IT	Only IT groups and advertisements are shown	P1
AC-003	Add a Facebook group	Group is saved and listed	P1
AC-004	Import a CSV of the 39 groups	All valid groups are imported with a result summary	P1
AC-005	Add an advertisement	Advertisement is saved	P1
AC-006	Select multiple groups	Selected groups and count are correct	P1
AC-007	Start distribution	First selected group opens in the distribution tab	P1
AC-008	Confirm Published	Current group status changes to Published	P1
AC-009	Click Next Group	Next group opens in the **same** tab	P1
AC-010	Click Skip	Current group is marked Skipped	P1
AC-011	Pause distribution	Distribution stops temporarily	P1
AC-012	Resume distribution	Continues from the saved position	P2
AC-013	Close and reopen Chrome mid-campaign	Campaign progress is recovered	P2
AC-014	Complete distribution	Final campaign summary is displayed	P1
AC-015	View history	Previous campaigns are listed with results	P2
AC-016	Distribute again to a published group	Duplicate warning is displayed	P2
AC-017 NEW	Click inside the Facebook page mid-campaign	Side panel controls stay visible	P1
AC-018 NEW	Close the distribution tab, then click Next	One new tab opens with the next group	P1
AC-019 NEW	Mark Approval Required / Failed with a reason	Status and reason saved; next group opens	P1
AC-020 NEW	CSV with an invalid URL and a duplicate row	Those rows are rejected with clear messages; the rest import	P1
AC-021 NEW	Back up, then restore on another Chrome profile	All groups, ads and campaigns are restored	P1
AC-022 NEW	Click Copy Ad Link	Master post URL is in the clipboard	P1

14 · DECISIONS TO CONFIRM

Points to agree before finalizing

Each point has a **proposed default** already used in this BRD. Confirm or change it.

1 **How many people will use it, and on which computers?**
Chrome local storage keeps data in one browser only. Two team members would have two separate copies.
✓ Default: one main user / one computer in Version 1; data moved by backup and restore. A shared cloud database can be a later phase.

2 **Side panel instead of popup?**
A popup closes as soon as the user clicks the Facebook page, which would break the Next-Group flow.
✓ Default: Chrome Side Panel as the main interface (FR-032).

3 **How will the user actually share in each group?**
Inside a group page, the usual way is to paste the ad link into a new post. Facebook's Share button (on the original post) is the other option.
✓ Default: support both with "Copy Ad Link" (FR-034) and "Open Original" in a separate tab (FR-021).

4 **Posting gap between groups?**
This protects the account from Facebook's spam limits.
✓ Default: off in Phase 1; optional setting in Phase 2 (FR-039).

5 **Can the same Facebook group be in both directories?**
Some community groups suit both property and IT ads.
✓ Default: yes, as two separate records (one per business), keeping BR-013 intact.

6 **Should resume and duplicate warnings move to Phase 1?**
The original note puts them in Phase 2, but losing progress halfway through 39 groups would be frustrating.
✓ Default: progress is saved from Phase 1 (BR-010); the full resume screen and warnings come in Phase 2.

7 **Installation method?**
Private / unpacked install for internal staff, or the Chrome Web Store (unlisted)?
✓ Default: internal install; decided in the Technical Document.

8 **Group list for NUVI IT**
The Engineering list (~39 groups) is ready. Is the IT list ready in the same CSV format?
✓ Default: prepare both CSV files before UAT.

15 · GLOSSARY

Terms used in this document

Term	Meaning
Master advertisement	The original post on the NUVI Engineering or NUVI IT Facebook Page that is shared to groups
Group directory	The list of Facebook groups kept for one business
Campaign	One distribution session of one advertisement to a set of groups (e.g. CAM-004)
Distribution tab	The single Chrome tab the extension moves from group to group
Side panel	A Chrome panel beside the web page that stays open while the user works on the page
Chrome extension	A small application installed into the Google Chrome browser
Manifest V3	The current Chrome extension platform version
Local storage	Storage inside the user's own Chrome browser; no server is involved
CSV	A simple spreadsheet file format (can be saved from Excel as "CSV UTF-8")
Backup file	A file containing all of the extension's data, used to restore or move it
